Bike Specific Install Notes and Tips

This is an aftermarket product that fits up different than the stock components, therefore, the installer may be required to set up components and to route lines in the "best way possible", which may not always be listed on this "Bike Specific" installation sheet. In any case, the installation must allow the handlebars to reach both steering stops, without pulling taught or kinking any lines, and without damaging any part of the motorcycle

Important Installation Considerations

Stock Clutch line will allow 3" of rise if rerouted.

Special Kit Requirements/Installation Tips

1. Contact - Slight fairing contact is ok as long as the steering stops can be reached without damaging the fairing

Recommended Riser Trim Length

1. 5.0" Riser Length = Trim Number 8

Recommended parts and replacement lines

1. Hydraulic Brake Line Top Fitting - 90 degree face down
2. Hydraulic Brake Line = Stock + 3"
3. Longer lines than stated here may be required if raising the bars more than the recommended trim length.
4. Fairing spacer pack recommended to lift fairing/windshield to allow more rise.
