

Buell 1125R(2008-)

Bike Specific Install Notes and Tips

This is an aftermarket product that fits up different than the stock components, therefore, the installer may be required to set up components and to route lines in the "best way possible", which may not always be listed on this "Bike Specific" installation sheet. In any case, the installation must allow the handlebars to reach both steering stops, without pulling taught or kinking any lines, and without damaging any part of the motorcycle

Important Installation Considerations

The stock handlebar mounts molded into the triple clamp, will restrict positioning of the bars. Custom throttle lines are available through Motion Pro. Please contact us for more information.

Special Kit Requirements/Installation Tips

1. Contact - Slight fairing contact is ok as long as the steering stops can be reached with out damaging the fairing
2. Zip ties or brackets holding excess electrical lines will need to be cut or removed to free up extra length.

Line Routing

1. All longer lines routed as stock.

Recommended parts and replacement lines

1. Hydraulic Brake Line = Stock + 3"
2. Hydraulic Clutch Line = Stock + 2"
