

# Kawasaki ZX-14R (2006+)

## Bike Specific Install Notes and Tips

This is an aftermarket product that fits up different than the stock components, therefore, the installer may be required to set up components and to route lines in the "best way possible", which may not always be listed on this "Bike Specific" installation sheet. In any case, the installation must allow the handlebars to reach both steering stops, without pulling taught or kinking any lines, and without damaging any part of the motorcycle

### **Important Installation Considerations**

Cyclops Clamps fit on top of the triple clamp which requires raising the forks about .5". No rise with the stock brake line.

### **Special Kit Requirements/Installation Tips**

1. Contact - Slight fairing contact is ok as long as the steering stops can be reached without damaging the fairing
2. Cyclops Clamps - are to be mounted on top of the triple clamp
3. Cyclops Clamps - Flipping the clamps upside down from what is in the instruction book, may offer more convertibility and better fitment.

### **Recommended Riser Trim Length**

1. 5.0" Riser Length = Trim Number 8

### **Recommended parts and replacement lines**

1. Hydraulic Brake Line = Stock + 5"
