

# Kawasaki ZX-9R (98+)

## Bike Specific Install Notes and Tips

This is an aftermarket product that fits up different than the stock components, therefore, the installer may be required to set up components and to route lines in the "best way possible", which may not always be listed on this "Bike Specific" installation sheet. In any case, the installation must allow the handlebars to reach both steering stops, without pulling taught or kinking any lines, and without damaging any part of the motorcycle

### **Important Installation Considerations**

Fairing stay restricts rise to less than one inch. If modified and a longer brake line is added, much more rise could be achieved.

### **Special Kit Requirements/Installation Tips**

1. Contact - Slight fairing contact is ok as long as the steering stops can be reached without damaging the fairing

### **Restrictions**

1. Fairing stay/windshield Frame - restricts rise. If the fairing stay is modified or removed, more rise can be achieved.

### **Line Routing**

1. Electrical Lines to be freed from their brackets and or Zip Ties, and run on the rider's side of the forks

### **Recommended Riser Trim Length**

1. 5.0" Riser Length = Trim Number 8

### **Recommended parts and replacement lines**

1. Hydraulic Brake Line = Stock + 3"
2. Hydraulic Clutch Line Top Fitting - 90 degree face to the side
