

Suzuki GSX-R600 (.97-99)

Bike Specific Install Notes and Tips

This is an aftermarket product that fits up different than the stock components, therefore, the installer may be required to set up components and to route lines in the "best way possible", which may not always be listed on this "Bike Specific" installation sheet. In any case, the installation must allow the handlebars to reach both steering stops, without pulling taught or kinking any lines, and without damaging any part of the motorcycle

Important Installation Considerations

Windshield bracket restricts rise to only about 1.5" above stock. With modified windshield bracket and longer brake line, more rise can be achieved.

Special Kit Requirements/Installation Tips

1. Contact - Slight fairing contact is ok as long as the steering stops can be reached without damaging the fairing
2. Moving - Moving the clutch lever, and brake lever toward the center of the motorcycle will allow greater upper fairing/windshield clearance

Restrictions

1. Fairing stay/windshield Frame - restricts rise. If the fairing stay is modified or removed, more rise can be achieved.

Recommended Riser Trim Length

1. 5.0" Riser Length = Trim Number 8
